

The Highly Flexible Machine Series

*In order to stay competitive in the fast changing economy, manufacturers strive hard to cut production cost; minimize initial investment; automate production line; expand product variety and so on. As a pioneer yet with **16-year-experience** in the plastic packaging field, **WEILI** has developed a new machine series with high flexibility which provides the best solution for customers to sustain the market.*

***WEILI's** MP Series was developed by combining the heating device and the blowing unit (blower) into one machine unit. **PLC** (Siemens) is introduced for the ease of machine operation while voltage regulators are still remained for better flexibility. Optional items are available to make the machine **fully automatic** in future.*

Flexibility:

Jar / Bottle

No matter wide mouth jars or small cosmetic bottle are also applicable in WEILI's machine.

PET / PP

PET, RPET, PP, PC, PMMA, AS, PS, MS, SAN, PLA, PES, PPSU, TRITAN and many more materials are feasible.

Semi / Fully Auto

Optional items like auto preform feeder or auto handle-inserting device are available.

PLC / Voltage Regulator

Heating temperature can be controlled by either PLC or voltage regulator.

Features:

Compact Design

Machine is compact and small, easy for transportation and storage.

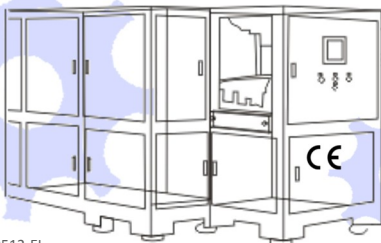

Energy Saving

High energy efficiency which minimize production cost in long-run.

* High speed PET machine series or manual machine series are also available depending on production requirements.

HONG KONG

1212, Fo Tan Industrial Center,
